[2] The Nagorno-Karabakh conflict is an ethnic and territorial conflict between Armenia and Azerbaijan over the disputed region of Nagorno-Karabakh, inhabited mostly by ethnic Armenians, and seven surrounding districts, inhabited mostly by Azerbaijanis until their expulsion during the First Nagorno-Karabakh War, which are de facto controlled by the self-declared Republic of Artsakh, but are internationally recognized as de jure part of Azerbaijan.

[3] The Sir Creek is a 96 km (60 mi) strip of water disputed between India and Pakistan in the Rann of Kutch marshlands. The creek, which opens up into the Arabian Sea, divides the Kutch region of the Indian state of Gujarat with the Sindh province of Pakistan. Originally and locally it is called 'Baan Ganga'. Sir Creek is named after the British representative. The long-standing dispute hinges in the actual demarcation "from the mouth of Sir Creek to the top of Sir Creek, and from the top of Sir Creek eastward to a point on the line designated on the Western Terminus". From this point onwards, the boundary is unambiguously fixed as defined by the Tribunal Award of 1968. **Dispute:** The dispute lies in the interpretation of the maritime boundary line between Kutch and Sindh. Before India's independence, the provincial region was a part of Bombay Presidency of British India. After India's independence in 1947, Sindh became a part of Pakistan while Kutch remained a part of India. Pakistan lays claim to the entire creek as per paras 9 and 10 of the Bombay Government Resolution of 1914 signed between then the Government of Sindh and Rao Maharaj of Kutch.

14. When a student weighing 45 kgs left a class, the average weight of the remaining 59 students increased by 200g. What is the average weight of the remaining 59 students?
(A) 57 (B) 58
(C) 59 (D) 60

Solution:
Let the average weight of the 59 students be X.
Therefore, the total weight of the 59 of them will be 59X.
The questions states that when the weight of this student who left is added, the total weight of the class = 59X + 45.
When this student is also included, the average weight decreases by 0.2 kgs.
$59X + 45/ 60 = X - 0.2$
$=> 59X + 45 = 60X - 12$
$=> 45 + 12 = 60X - 59A$
$=> X = 57.$
